

How FLEA FREE Food Supplement work?

A: When Flea Free is added to your pet's water or food, it goes to work immediately, boosting your pet's immune system and emitting an enzyme that shields the particular protein the female flea, tick, mosquitoes and other parasites need to reproduce. By not sensing the protein, the female flea and other parasites have no reason to bite and will jump off in search of another blood meal. By rendered the parasites unable to draw blood will lessen their lifespan to 20 to 48 hours, in return breaking the reproductive cycle.

Our journey

In 1984, tragedy changed our lives forever. Two of our beloved Shelties—one only four years old, the other nine and in perfect health—were lost after exposure to a pesticide known as Adam's Flea Spray. We had no idea it was dangerous.

From that day, we made a promise: to protect pets, people, and our planet from harmful chemicals. For over 40 years, we've created a complete line of safe, natural, and holistic pet products—crafted with love, backed by care, and proven to protect without toxic ingredients.

Our mission is simple:

- Educate pet parents about hidden dangers
- Protect pets from harmful chemicals & pesticides
- Safeguard the environment we all share

Thanks to the support of pet lovers around the world, we're making a difference—one family at a time.

Natural Pet Products
Safe for pets. Safe for families and Eco-friendly for our environment
